

# Efficiency Maine: Home Upgrades and Incentives

Improving your home's performance can provide many benefits, like lower heating and cooling bills, more home comfort, and better indoor air quality—plus they qualify for rebates and incentives!

Evergreen Home Performance is an Efficiency Maine Registered Vendor—meaning we can help you maximize your savings on several energy efficiency upgrades for your Midcoast Maine Home.

Take a look at what services we offer that are eligible for up to \$8,000 in Efficiency Maine rebates and incentives!

## Energy Audits

We recommend starting every home performance upgrade with a free energy assessment to fully understand where your home has inefficiencies and where it needs improvements.

## Air Sealing

Air sealing reduces the amount of unwanted airflow in and out of your home, allowing for more control over your home comfort.

## Attic Insulation

By stabilizing the indoor temperatures within your home, attic insulation can provide year-round comfort solutions, prevent ice dams, and more.

## Basement & Crawl Space Insulation

Basement insulation can protect your home from cold temperatures and stop dampness or cold air from infiltrating through your foundation walls and sill plates.

## Wall Insulation

Wall insulation creates an added barrier between the living spaces of your home and the outdoors, bringing year round comfort, noise reduction, and a more energy efficient HVAC system.
